

## From the President

Ah, Spring. Can it be here already? The calendar says so yet I wonder if Mother Nature has something else in mind. This time of year we start planning our spring programs which include annual tune-ups, a/c start-ups and various follow up work that, for one reason or another, we were not able to finish during the winter. If you have not had your heating system tuned-up in over a year or you need follow up work scheduled... **CALL NOW!!** In a flash summer will be over and fall is our busiest time of year.

I have started working on our cap program for this up coming heating system. As always, predicting oil prices and weather patterns seven months ahead is quite a challenge. This year's programs, however, will have a few extra bells and whistles. These changes should make this years heating season one of our best ever. A separate newsletter will be devoted to explaining the 2007-2008 cap program and will include the sign up sheet. That newsletter is due to come out in the coming month.

Until then,

Bob Warren

## BIOFUEL NEWS !!!

We are probably the fastest growing Biofuel company in MA. The most exciting part of this is the fact that our small family owned company is truly making a difference. Since our start-up in 2004 Mass Biofuel / Fisher-Churchill has delivered 42,000 gallons of pure soy-based Biofuel. That's over 1,000 barrels of unrefined crude oil that we didn't need to import, refine and burn. Just as important are the cleaner emissions we, as a group, are exhausting into our homes and community from burning this cleaner fuel. We take great pride in the effort and so should all of our customers using Biofuel.

## FROM THE SERVICE DESK

According to the National Oilheat Research Alliance, you can save as much as 5% off your heating bill by scheduling annual tune-ups for your heating systems. We bring this to your attention because too often annual tune-ups are overlooked (probably as often as my own trucks tune-up is overlooked!). We all get busy sometimes, too busy, and before you know it the heating system (or truck) starts performing poorly or stops running all together. Preventative maintenance is very important especially on your heating system. Many service calls can be avoided if the tune-up is done annually. This not only

saves you money on your heating bill, it also saves on costly service repairs. We try very hard to inform you if your system is due for a tune-up. However, it is impossible to contact everybody. Please call us if it has been over a year since your last tune-up

If you have a service contract, you still must have the tune-up done. It is included in the cost of the contract and must be done once a year. A heating system is more likely to break down if the system is not tuned-up. We will not be able to honor any service contracts in which yearly maintenance is not preformed.

**CLEAN AIR:** Many people believe that their heating and cooling systems are already cleaning the air of indoor pollutants and allergens. However, most systems are only equipped with a standard 1" throwaway filter. These filters are designed primarily to keep large particles from damaging the system. They are not designed to actually clean the air. We believe that your heating and cooling systems should clean as well as condition the air in your home. That is why we use the **ACCUCLEAN** filtration system from American Standard. It delivers unbeatable clean air comfort. **It is 8 times more effective that the best HEPA room appliance and 100 times more effective that the standard 1" throwaway filter or ionic-type room appliance.** If you or a loved one suffer from allergies or asthma, or if you just simply want cleaner air, please give us a call. With ACCUCLEAN as a part of your total home comfort system, you and your family will breathe easier then ever before.

## AIR CONDITIONING

The importance of yearly AC service is often overlooked. Just as your oil burner needs annual maintenance so does your cooling system. Low refrigerant, clogged filters and dirty coils can decrease the efficiency of your system and severely damage the equipment. Unfortunately, by the time most homeowners realize there is a problem it is too late. This results in high service bills and the need for new equipment. **Be proactive and save money!** Call and schedule your annual AC tune-up now and protect your investment. It may be the best \$99.00(plus parts) you spend this year.

Get rid of those "window rattlers" that are a nuisance to put in and take out. **Call now for a free estimate.** Cooling systems have never been more efficient not to mention we have the best installation team in the business. Our systems start as low as \$2995.00 (less electrical) and they will add value to your home and save money on your electric bills. Your comfort is our business.
